

**Name:** A. Hemanth Kumar Reddy  
**Roll No:** 224E1A3337  
**Course:** Data Analytics with Tableau  
**Assignment:** Assignment 1  
**Team Id:-** LTVIP2025TMID52146  
**Team size:-** 4

### **Objective:**

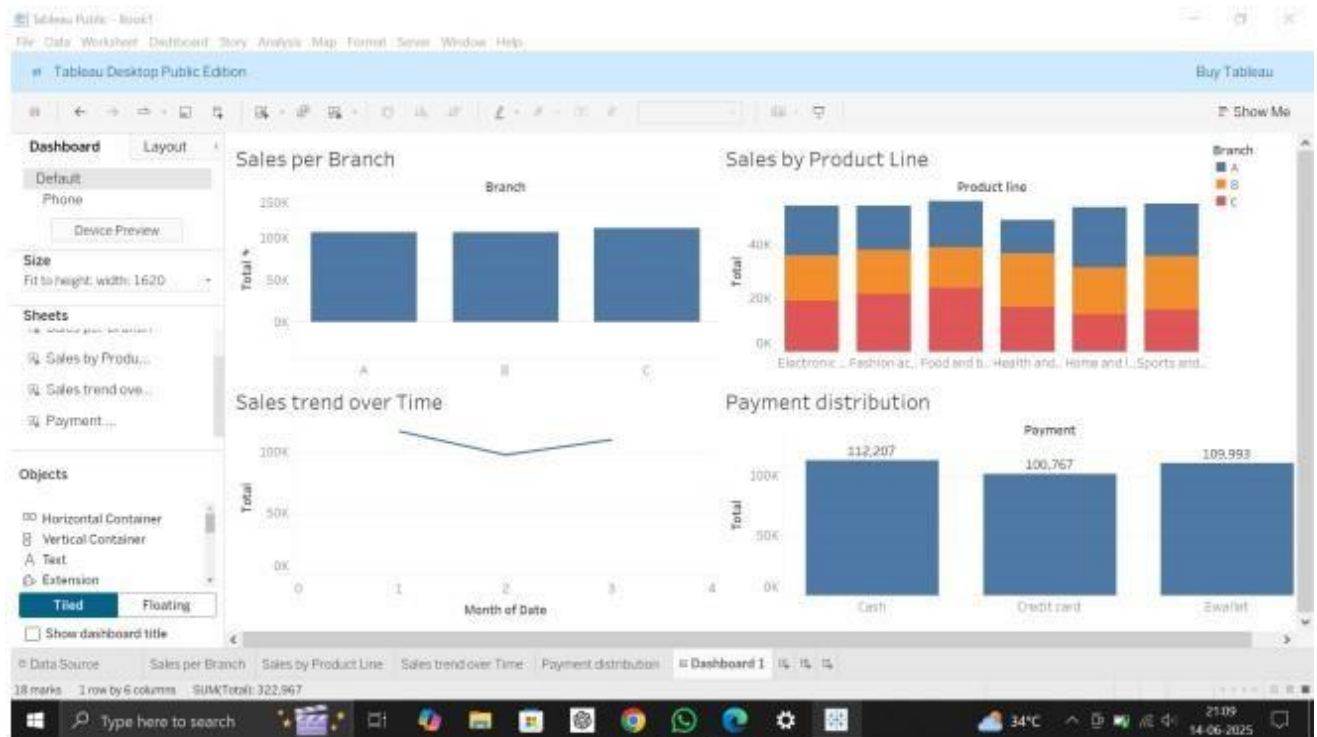

The objective of this assignment is to analyze supermarket sales data collected from three different branches over a three-month period. The analysis focuses on understanding sales distribution, trends over time, and payment patterns to assist in better decision-making in a competitive market.

---

### **Process Followed:**

1. Imported the provided supermarket sales dataset into Tableau.
  2. Removed unnecessary columns that were not useful for the analysis.
  3. Created four individual charts:
    - **Sales per Branch:** Comparison of total sales among branches A, B, and C.
    - **Sales by Product Line:** Sales distribution across different product categories.
    - **Sales Trend Over Time:** Monthly sales trends over the three-month period.
    - **Payment Distribution:** Sales split by payment methods like Cash, Credit Card, and E-wallet.
  4. Combined all charts into a single interactive dashboard using containers for proper layout.
-

## Dashboard:

The dashboard provides a clear overview of:

- Which branch performs best.
- Which product lines generate higher sales.
- The trend of sales over the selected period.
- Preferred customer payment methods.
